

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. - 29. (Canceled)
30. (Previously Presented) A liquid crystal display device comprising:
 - a first electrode;
 - a second electrode opposing the first electrode;
 - a dot area, formed at an overlapping portion of the first electrode and the second electrode, for display;
 - the dot area including a first section and a second section and being capable of reflective display;
 - a color filter arranged in the first section; and
 - a layer arranged in the second section, the layer being substantially transparent,and
 - no color filters being arranged in the second section.
31. (Previously Presented) A liquid crystal display device according to claim 30, the dot area including a light-variable area, in which the color filter is arranged, for modulating light,
 - wherein the color filter occupies 15% or more and 45% or less of the light-variable area.
32. (Canceled)
33. (Previously Presented) The liquid crystal display device according to claim 30, the color filter being divided into a plurality of parts.
34. - 36. (Canceled)
37. (Previously Presented) A liquid crystal display device comprising:

a first electrode;

a second electrode opposing the first electrode;

a dot area including a first section and a second section and being capable of reflective display;

a color filter arranged in the first section; and

a layer arranged in the second section, the layer being substantially transparent.

38. (Previously Presented) A liquid crystal display device according to claim 37, a thickness of the color filter and a thickness of the layer are different, wherein a difference of the thicknesses is 0.5 μ m or less.

39. - 48. (Canceled)

49. (Previously Presented) A liquid crystal display device according to claim 30, further comprising:

the color filter includes a plurality of color filters, each of the plurality of color filters having different colors to the other.

50. (Previously Presented) A liquid crystal display device according to claim 49, further comprising:

a black mask provided between the dot area and adjacent dot areas.

51. (Previously Presented) A liquid crystal display device according to claim 50, the black mask including a combination of the plurality of color filters.

52. (Previously Presented) A liquid crystal display device according to claim 49, further comprising:

a layer with transparency arranged between the dot area and adjacent dot areas.

53. (Previously Presented) A liquid crystal display device according to claim 49, the plurality of color filters including a red filter and a cyan filter.

54. (Previously Presented) A liquid crystal display device according to claim 49,

the plurality of color filters including a red filter, a blue filter, and a green filter.

55. (Previously Presented) A liquid crystal display device according to claim 49, a contrast ratio of display being 15:1 or more.

56. (Previously Presented) A liquid crystal display device comprising:
a first electrode;
a second electrode opposing the first electrode;
a dot area including a first section and a second section and being capable of reflective display; and
a color filter selectively arranged in the first section and a transparent area having no color filter arranged in the second section.

57. (Previously Presented) A liquid crystal display device according to claim 56, wherein the liquid crystal display device is driven by voltages applied to the dot area,
the voltages comprising:
a first voltage applied to the first section of the dot area; and
a second voltage applied to the second section of the dot area,
the second voltage being applied to the dot area while the first voltage is applied thereto,
each of the voltages being different to the other.

58. (Previously Presented) A liquid crystal display device according to claim 57, the first voltage being lower than the second voltage.

59. (Previously Presented) A liquid crystal display device according to claim 30, further comprising:
an active element connected to one of the first and second electrodes.

60. (Previously Presented) A liquid crystal display device according to claim 37, further comprising a layer with transparency arranged at a peripheral area of the dot area.
61. (Previously Presented) A liquid crystal display device comprising:
a first electrode;
a second electrode opposing the first electrode;
a dot area including a first section and a second section and being capable of reflective display;
a transparent area having no color filter arranged in the second section; and
a color filter arranged in the first section, wherein a size of the color filter is smaller than a size of the dot area.
62. (Previously Presented) A liquid crystal display device comprising:
a first electrode;
a second electrode opposing the first electrode;
a dot area including a first section and a second section and being capable of reflective display;
a color filter arranged in the first section, and
a layer arranged in the second section, the layer being substantially transparent, the first section comprising about 15% or more and about 45% or less of the dot area.
63. (Previously Presented) An electronic apparatus comprising:
a display including a liquid crystal display device according to claim 30.
64. (Previously Presented) An electronic apparatus comprising:
a display including a liquid crystal display device according to claim 37.
65. (Previously Presented) An electronic apparatus comprising:
a display including a liquid crystal display device according to claim 56.
66. (Previously Presented) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 61.

67. (Previously Presented) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 62.

68. (Previously Presented) A liquid crystal display device comprising:

a first electrode extending in a first plane;

a second electrode opposing the first electrode and extending in a second plane that is substantially parallel to the first plane;

a dot area, formed at an overlapping portion of the first electrode and the second electrode, for display,

the dot area including a first section and a second section and being capable of reflective display;

a color filter arranged in the first section; and

a layer arranged in the second section, the layer being substantially transparent,

no color filters being arranged in the second section, and

the color filter and the layer are disposed adjacent to each other in a common plane that is substantially parallel to the first and second planes.

69. (Previously Presented) A liquid crystal display device according to claim 68,

the dot area including a light-variable area, in which the color filter is arranged, for modulating light,

wherein the color filter occupies 15% or more and 45% or less of the light-variable area.

70. (Previously Presented) A liquid crystal display device according to claim 68, the color filter being divided into a plurality of parts.

71. (Previously Presented) A liquid crystal display device according to claim 68, further comprising:

a color filter that includes a plurality of color filters, each of the plurality of color filters having different colors to the other.

72. (Previously Presented) A liquid crystal display device according to claim 71, further comprising:

a black mask provided between the dot area and adjacent dot areas.

73. (Previously Presented) A liquid crystal display device according to claim 72, the black mask including a combination of the plurality of color filters.

74. (Previously Presented) A liquid crystal display device according to claim 71, further comprising:

a layer with transparency arranged between the dot area and adjacent dot areas.

75. (Previously Presented) A liquid crystal display device according to claim 71, the plurality of color filters including a red filter and a cyan filter.

76. (Previously Presented) A liquid crystal display device according to claim 71, the plurality of color filters including a red filter, a blue filter, and a green filter.

77. (Previously Presented) A liquid crystal display device according to claim 71, a contrast ratio of display being 15:1 or more.

78. (Previously Presented) An electronic apparatus comprising:

a display including a liquid crystal display device according to claim 68.

79. (New) A liquid crystal display device according to claim 30, the layer arranged in the second section being located in an area capable of reflective display.

80. (New) A liquid crystal display device according to claim 37, the layer arranged in the second section being located in an area capable of reflective display.

81. (New) A liquid crystal display device according to claim 56, the transparent area arranged in the second section being located in an area capable of reflective display.

82. (New) A liquid crystal display device according to claim 61, the transparent area arranged in the second section being located in an area capable of reflective display.

83. (New) A liquid crystal display device according to claim 62, the layer arranged in the second section being located in an area capable of reflective display.

84. (New) A liquid crystal display device according to claim 68, the layer arranged in the second section being located in an area capable of reflective display.
